(2008)*

In 1898 Edwin Ford made products to meet his own needs as a utility superintendent. Other utility superintendents soon heard of Edwin's inventions and soon the Ford Meter Box was a popular item in northern Indiana. Since that time requests from all regions of the country have come to The Ford Meter Box Company and today we offer the widest variety of meter setting products in the industry.

A product line this varied provides many meter setting solutions. Requirements of a utility in the southern climates are vastly different from those in the colder climates in the North. Ford Meter Box is committed to offer the variety of options needed to meet the requirements of any modern water system, *anywhere*.

One hundred years ago Edwin Ford could not have imagined the demands of a modern water utility. Higher pressures, backflow concerns, and electronic meter reading have changed the nature of our industry in recent years. Although industry needs have changed, Ford Meter Box has not lost sight of Edwin Ford's original goals. Today Ford Meter Box continues to produce high quality products, delivered at a fair price and backed with prompt customer service.

For more information about Ford Meter Box's ability to meet your meter setting requirements, contact your local Ford Distributor or The Ford Meter Box Company.
