

FORD FITTINGS FOR LEAD SERVICE LINE REPLACEMENT *FOR FAST AND EASY REMOVAL OF LEAD LINES*

As buried lead services are unearthed because of concern over water quality, construction, or line failure, opportunities exist to replace lead lines with different material. By using Ford conversion connections, copper or plastic lines may be attached to an existing lead service corporation stop. Ford offers a wide variety of conversion connections to accommodate existing corporation stops in the field. For more information about Ford's conversion connections contact your local Ford distributor, The Ford Meter Box Company, Inc., or visit www.fordmeterbox.com.

FORD CONVERSION CONNECTIONS FOR LEAD SERVICE CORPORATION STOPS

When ordering conversion connections for flanged or wiped lead service corporation stops, check the outlet size to ensure a correct fit. The size of this connection may vary slightly depending upon the manufacturer, so measuring dimension "A" is important. Refer to Catalog Section A for proper sizing.
