

# The Meter Setter

## An Original - THE FORD COPPERSETTER! Available for Meters in Sizes from 5/8" to 2 "

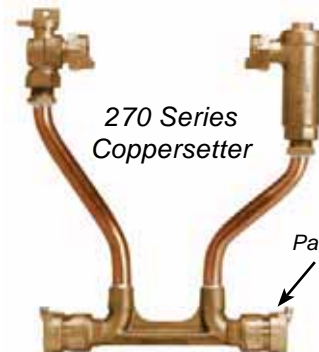

In 1935, John L. Ford patented the Coppersetter. Today, Ford Meter Box produces the largest variety of Coppersetters in the industry. They are available with standard AWWA 85-5-5-5 brass, or constructed using no-lead brass components. What has led to the expansive choice of configurations? The world offers many different conditions and requirements for setting a water meter outside. Ford Coppersetters are available for new and existing settings and are engineered to be reliable and simple to install.

Coppersetter*

When a new service is being metered, the Ford 70 Series Coppersetter is quick to install and dependable for years to come. Manufactured in a wide range of heights, the Ford 70 Series Coppersetter is available with a variety of inlet and outlet connections for copper, plastic or iron pipe. Inlet valves are available as angle key or angle ball valves. For the outlet, Ford offers an angle key valve, angle compression valve, single check valve, an ASSE approved dual check valve or an ASSE approved angle cartridge style dual check valve for integral backflow protection. Ford 70 Series Coppersetters are made from copper tubing and components assembled with lead-free solder.

The Ford 270 Series Coppersetter is designed to provide the same advantages as the 70 Series, but is configured for meter installation in existing service lines. Made of the same quality materials as the 70 Series Coppersetter, the 270 Series Coppersetter uses removable Pack Joint assemblies as inlet and outlet service line fittings. This design allows the installer

sold separately*

to change quickly between Pack Joint and Grip Joint fittings for a wide variety of service line materials. If the type of existing service line is unknown, a 270 Series along with a selection of Pack Joint Assembly styles will assure a fast and easy installation.

For larger meter settings, Ford Meter Box offers the 70 Series Coppersetter for 1-1/2" and 2" meters. This large meter setting will provide the same advantages as smaller Ford Coppersetters and is manufactured of the same high quality materials. A wide variety of inlet and outlet connections and valves are available for Ford Coppersetters for 1-1/2" and 2" meters.
