

The Ford Sampling Station *Custom-Made for You*

The first six letters in the word "Customer" spell "Custom." Ford Meter Box brings experience and innovative energy to customers' problems with custom-designed products. Such innovation requires careful communication to successfully address customers' needs beyond conventional catalog offerings.

One example is the Ford Retrosetter Sampling Station. Designed to provide a safe and efficient method for obtaining water samples from underground meter settings, the Ford Sampling Station converts an existing meter setting to a combination setter and sampling station.

Using a quick disconnect, the valved sampling extension pipe easily connects (and disconnects) to a coppersetter or retrosetter and is ready for sampling.

Available for 5/8" through 1" meter settings, the Ford Sampling Station is available in many standard configurations. However, we can build custom sampling stations for your specific requirements, including custom operating valves, connections and tubing lengths. Additionally, stainless steel and no-lead components are available.

Let us know how we can help. If we don't have it, we can make it. For more information on the Ford Retrosetter Sampling Station, contact The Ford Meter Box Company or your local Ford distributor.
