Need an Adjustment?

If your meter pits are not level with the ground surface, Ford Meter Box has the solution. Ford's patent pending adjustable height pit extension is constructed of high strength HDPE and easily connects to the top of a buried 18" diameter coil or standard pit*. With 12" of adjustability in four 3" increments, you can easily ensure your pit is at the proper elevation. Labels identify height and locking direction, and the positive stop provides confidence of correct positioning. The adjustable height pit extension is also available to order on new pits for situations where final grade may be unknown.
