Contact Person: Charlie Chapman

The Ford Meter Box Company introduces the second generation Automated Measuring System (AMS) Test Bench. Whether installing with a new Test Bench, or applying the AMS to an existing bench with a retro-fit kit, the AMS Test Bench is the most advanced Meter Testing Bench available. In addition to automating the manual tasks of securing the meters and purging air from the system, the AMS also monitors the flow of water, automatically shutting down the system when the test is complete or the tank is full. For longer multi-station benches, the touchscreen computer slides along an aluminum rail allowing for easy data entry of the meter readings. When testing is complete, the open source OPC server allows the operator to connect to the data saved on the bench for custom output of reports. For more information about the Ford AMS, contact The Ford Meter Box Company, Inc.
