The Ford Meter Box gravity sewer pipe restraint is specifically designed for use with sewer pipe and accommodates a casing spacer that can easily fit both large and small casings. The casing spacer's unique design offers two settings set with a slot and tab connection, allowing the casing spacer diameter to be adjusted based on the casing size. The combined location of the connecting lug and clamping pad prevents the ring from pivoting and squeezing the pipe, thus reducing stress on the pipe wall. This lug location also optimizes the cross section thickness, resulting in an easy-to-handle and easy-to-install restraint.
