

## 4" Through 48" Stainless Steel Tapping Sleeve

When you need a durable tapping sleeve for large size-on-size taps, choose Ford Meter Box® FTSAS style tapping sleeves. The 100% stainless steel construction is carefully passivated after welding for superior corrosion resistance. A large outlet gasket with a broad cross section resists rolling (especially in large diameter applications) and provides a dependable seal while the split design and removable bolts make for an easy installation. Available in sizes 4"-48", FTSAS style tapping sleeves are the answer for your largest tapping applications.

### Features:

- Type 304 stainless steel body, outlet, flange, studs, nuts, washers, lugs and armors
- Removable bolts
- Large outlet gasket has a broad cross section to resist rolling and to provide dependable seal
- Proper use of test plug ensures positive seal before tapping
- Intended for use on asbestos-cement, cast or ductile iron, and/or PVC pipe
- Rated for 250 psi up to 24" outlets. 30"-36" outlets rated for 200 psi. Ratings not to exceed the rating of the pipe.

Options: 316 stainless steel, EPDM gasket, carbon steel flange, MJ outlet
