## LID FEATURES AND OPTIONS

### Ford Lifter Worm Lock

All locking lids feature a unique “worm” type lock. Two things happen as the key is turned and the lid is opened:

1. The hard cast iron worm rotates, applying a powerful screw-jack action between the lid and cover to break any seal of ice or dirt,  
**and**
2. The key attaches itself to the forged silicon bronze pentagon bolt, forming a lifter handle for the lid, then automatically disengages from the lid as the cover is locked.

### Optional ERT Bracket:

The plastic ERT bracket is ultrasonically installed at the factory when ordered with the plastic lid (add “-BR” to end of catalog number).

The ERT bracket may be field installed to any Ford Meter Box plastic lid having the three bracket posts on the underside, attached with three stainless steel clip rings.
