

ECL Locking Expansion Connection

Product Bulletin

04/2021

New or existing meter settings that include an expansion connection can be secured to discourage or prevent unauthorized removal of water meters. Once properly installed, a proprietary key is required to engage or disengage a security screw that recesses within the Expansion Connection. The security screw engages any one of several grooves on the barrel to prevent removal of the meter.

- Expansion Connection provides a watertight connection between the meter and setting
- Meter / Expansion Connection assembly can be easily installed or removed without a wrench
- Optional security screw offers tamper resistant connection
- Security screw is actuated with a proprietary access key
- Option: Can be ordered less the security screw in order for the utility or municipality to procure their own unique security screw pattern and access key
- Access key sold separately

METER SIZE	PART NUMBER WITH FORD SECURITY SCREW	PART NUMBER LESS SECURITY SCREW
5/8"	ECL-1-SSF-NL	ECL-1-NL
5/8" x 3/4"	ECL-23-SSF-NL	ECL-23-NL
1"	ECL-4-SSF-NL	ECL-4-NL
