

The Meter Setter

Smooth Operator

For years Ford Meter Box has stressed the importance of using the right tools for installation of waterworks brass products. Standard pipe wrenches can cause severe damage to malleable brass components. Loose-fitting wrenches can distort the body of a valve causing it to leak.

Ford Meter Box now offers the Reed RCORP Smooth Jaw Wrench for proper installation of corporation stops or other brass products. The RCORP Smooth Jaw Wrench is constructed of strong, forged steel for a lifetime of reliable service. The smooth jaws open to 4-5/8" and can accommodate brass products up to 2" and close tight for opening and closing corporation stops.

Ford Meter Box recommends the use of tightly engaged, smooth-jawed wrenches because they do not distort fittings or valves during installation. The smooth jaws of the RCORP Wrench (or similar RIGID smooth-jawed wrenches) are strong yet gentle on valves and fittings. A coarse adjustment thread and large thumbscrew provide quick and easy movement for the numerous size changes encountered on the job. For more information, contact Ford Meter Box or your local Ford distributor.
