

## The Ford Plastic Pit Setter For 1½" and 2" Meters

For years, the Ford Meter Box Company has been manufacturing high quality plastic pit settings for residential services. Ford Plastic Pit Setters have been a great success and are extremely popular with water companies across the nation due to their light weight, durable construction, and ease of installation.

Now Ford Meter Box announces the new Plastic Pit Setter for 1-1/2" and 2" water meters. It allows you to set larger meters with the same ease and assurance as smaller meters and receive the same benefits offered by our original Pit Setters.

The Ford Plastic Pit Setter for 1-1/2" and 2" meters features a pit constructed from heavy duty corrugated plastic for lighter weight and extra strength. Like our regular sized Pit Setters, the 1-1/2" and 2" sizes offer a full range of inlet and outlet couplings for a variety of service line materials. The inlet and outlet valves, chosen by the customer, are

soldered to copper tube risers, which are anchored to a sturdy PVC brace pipe to prevent shifting inside the setting.

The pit has an open bottom to allow warm air from below the frost line to circulate in the pit setting preventing freeze-ups. The pit is also designed with adequate distance between the side wall and riser preventing frost jump.

Ford Meter Box also offers a special lid with precast holes for a remote electronic meter reading module. This lid is specially configured for this purpose, and it is manufactured so that the electronic meter reading module will seat against a flat surface.

The Ford Plastic Pit Setter for 1-1/2" and 2" meters is another Ford innovation designed to make setting large water meters a little easier.
