What a Relief!

Is your water main feeling stressed and under a lot of pressure? Let Ford Meter Box help! Ford has recently expanded its current offering of blow-off ball valves. These valves typically branch off the end of a water main and provide a means for flushing excess sediment, venting excess air, and relieving pressure. With a male outlet connection that can accommodate a hose or diffuser, you can direct the water and debris out of the main.

Give your water main a way to blow off that extra pressure. Visit our website or call Ford Meter Box for details.

Features:

- Allows user to relieve excess pressure and flush sediment from water main
- Vertical inlet and outlet with easy access to the tee-head
- 300 psi working pressure
- Composed of waterworks brass compliant with AWWA C800's latest revisions

Ford Blow-off Ball Valves
