

Bridging the Gap

Ford Meter Box understands that sometimes a project doesn't go as anticipated. Even with the best planning, sometimes a connection comes up short. Whether laying a new line or replacing an existing service, a job may require an extended length valve or coupling. Ford Meter Box's extended length products eliminate the need for multiple couplings or extra tubing. Products with an extended length provide more flexibility, especially when lay lengths are unknown prior to replacing an existing service. When you need to bridge the gap, Ford Meter Box has the product for you!

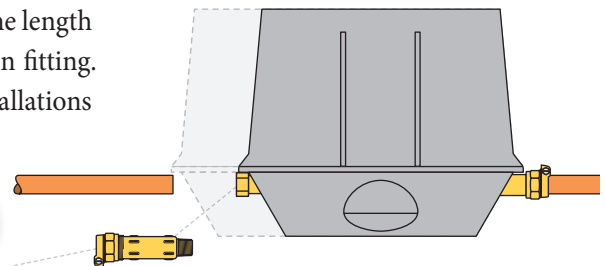

- **Extended length curb valves** – Particularly helpful when replacing services located near a basement or wall, Ford's extended length curb valve provides greater flexibility and more room to work. By moving the connection away from the building, installation of a curb box is much easier.

- **Extended length service valves** – For extra-long meter and service valves, Ford Meter Box offers BL valves. Many types of valve configurations are available in longer-than-standard lengths.

- **Extended length couplings** – To address retrofit applications with different lay lengths, Ford's extended length coupling allows the user to extend a service line up to 3". By sliding the pipe inside the long coupling, the length can be adjusted and the connection secured with the compression fitting. These couplings facilitate both retrofit applications and new installations for both fit and ease of assembly.

For more information on Ford's extended length items, contact your local Ford® representative.
