

## Seal the Deal with a Cap-Style Flange Gasket

Now included on all Ford® tapping sleeves with 4” through 24” outlets, the cap-style flange gasket offers an easy to install and water tight seal on the outlet flange.

Built for ease of use in the trenches, the gasket features a design that conveniently snaps on and stays on with a raised compression ring near the inside diameter of the gasket. This allows for concentration of the clamping load onto the inner surface area to create a superior sealing capability. Eliminating the need for extra hands or tricky adhesives, the cap-style flange gasket is a reliable and effective gasket solution for tapping sleeves.

The newly expanded range of Ford flange gaskets provides confidence in the ditch. Constructed of NBR (Buna-N) materials and certified to ANSI/NSF 61, the cap style gasket really seals the deal.
