

Ford Meter Box Introduces the AMS, *Automated Measuring System*, for use with Ford Water Meter Test Benches

Ford Meter Box is happy to announce the availability of the AMS, Automated Measuring System. AMS takes the time-proven and reliable Ford test bench to the next level of water meter testing.

The AMS is available for new or any **existing** Indianapolis Style or Standard Ford test bench. Consisting of modular components, AMS can be installed fast and easy.

The Ford AMS combines the trusted method of weighing metered water with computer automation to ensure accurate measurements. Weighing metered water eliminates possible problems with optical, mechanical or volume measuring devices. The AMS computer compensates for the weight of the tank, the water temperature, as well as the altitude and latitude of the test bench. Calculating these factors ensures that the Ford AMS is the most accurate water meter test system on the market today. For easy operation, you can choose from pre-programmed AWWA Standard M6 tests.

How does AMS work? The Ford AMS uses an easy to operate touch screen, menu-driven computer. The data gathered during the test is compiled by a computer and readied for output. Meter test results are printed by using the AMS supplied printer.

If you think you are ready for AMS, contact your local Ford distributor or The Ford Meter Box Company.
