

Made in America

At Ford Meter Box, we are deeply gratified to build waterworks products that support and sustain the communities we serve. The “Made in America” moniker affirms a high standard of quality and craftsmanship for consumers all over the world. For 125 years, skilled workers in Wabash, Indiana and Pell City, Alabama have proven that Ford delivers on that promise.

Various laws and regulations establish requirements for U.S. government procurement, or financial assistance, to support American manufacturing. These policies are designed to promote domestic production in critical industries, make supply chains more resilient, and ultimately reduce the need to spend taxpayer dollars on offshore-sourced goods.

Whether the need is for Buy America, Buy American, American Iron and Steel Act (AIS), or newer Build America, Buy America (BABA) requirements, Ford offers a wide selection of products. Choose Ford when you need to meet U.S. domestic programs. Our employees are proud to manufacture products that meet these terms for our local communities, businesses, and utilities.

To ensure any product meets domestic requirements, please indicate which program you need to comply with before ordering. Certification letters and an updated list of qualifying products are available by contacting your customer service manager.
