

Go Big with Baker!

Earlier this year, The Ford Meter Box Company, Inc., through its wholly owned subsidiary, Baker Coupling, LLC, entered into an agreement to acquire certain assets of Baker Coupling Company, Inc., expanding Ford's line of pipe products.

Previously located in Los Angeles, California, production has moved to Ford's manufacturing facilities in Pell City, Alabama.

Baker Coupling, founded over one hundred years ago and incorporated in 1939, was a privately held manufacturer of sleeve-type couplings, transition and reducing couplings, expansion and dismantling joints, tapping sleeves, flanged coupling adaptors, and related items. Its engineered products may be found in such large-scale applications as pump stations, aqueducts, and treatment plants.

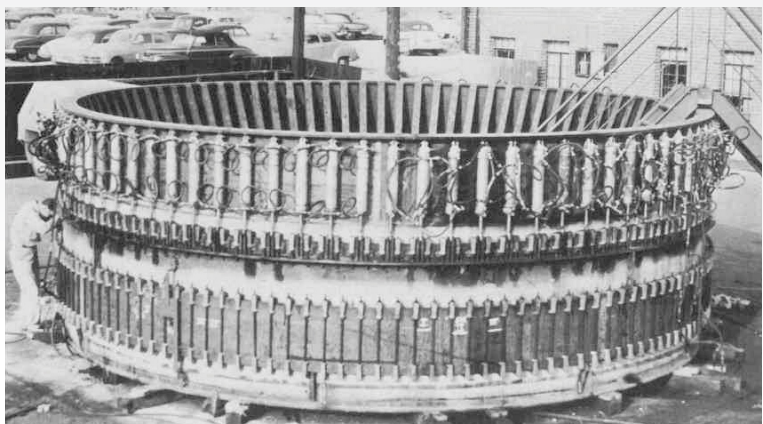

The addition of the Baker line complements Ford's existing pipe products by expanding the range of product sizes previously available. To support and engineer our new offering, a dedicated team of Ford employees has been assigned to support Baker products. For questions on Baker Coupling products, please contact our specialist, Kari Niccum, at BakerCoupling@fordmeterbox.com.
