

## IS YOUR FORD CATALOG UP TO DATE?

The Ford Meter Box Company offers the most comprehensive line of water works brass valves and fittings, water meter setting equipment, water works pipe products, and pipe line restraint products in the water works industry.

The Ford Catalog has changed over the past several years. For example, the number designation on catalog sections has been eliminated. The date of the catalog section will be the determining factor as to the revision level of a catalog section. Another major change is with catalog section U. As the family of products in the Uni-Flange® line grew, so did our many Uni-Flange® catalog sections. We have combined all the products in the Uni-Flange® line into one, easy to read, catalog section. We have redesigned the format of this new catalog section so that all products appear in their numerical sequence. Finding the right product and its application should be easier.

Ford Meter Box continually updates its sales literature and catalog layout. Our goal is to help Ford customers find a product that will solve their specific water works problem.

Contact your local Ford distributor or the Ford Meter Box Advertising Department and request a catalog section to bring your catalog up to date. The following list shows the current revision levels for Ford catalogs.

- A : 12/99 - Corporation Stop
- AA : 07/99 - Tapping Sleeves & Saddles
