

The Meter Setter

Ford Introduces The Ultra-Seal Flange Gasket

Most manufacturers prefer to hold the leading edge on product quality and innovation. The Ford Meter Box Company, Inc. has established a tradition for manufacturing high-quality and innovative products that provide exceptional performance. Ford continues this tradition by introducing the Ultra-Seal cap-style flange gasket.

The Ford high-performance Ultra-Seal cap-style flange gasket literally extends beyond the edge of traditional flange gaskets. Unlike the ring-style and full-face gaskets, the Ford Ultra-Seal has a lip around its outside edge that fits over the side of the flange face like a cap. This unique design keeps the gasket correctly centered and properly positioned. Ordinary gaskets require extra time and care to ensure that

they remain in place during installation. Simply place the Ultra-Seal onto a flange; the gasket lip will hold it in position.

The Ultra-Seal gasket is not only easier to use; it also out-performs typical flange gaskets. The unique Ultra-Seal design provides an exceptional hydraulic seal with a concentrated gasket compression, which can compensate for most flaws on mating flanges. The Ultra-Seal can withstand pressures well beyond traditional water works applications, well above the flange rating.

If you are looking for that leading edge, the Ford Ultra-Seal flange gasket will ensure simple installation and reliable performance far beyond traditional flange gaskets.

For more information about the Ultra-Seal cap-style gasket, contact your local Ford distributor or The Ford Meter Box Company, Inc.
