

FORD IS **BIG** ON TAPPING SLEEVES

More than 23 years ago, The Ford Meter Box Company announced the first all stainless steel tapping sleeve. We introduced this design to the waterworks industry and achieved great success. Since that time, our engineers have improved and expanded this product line.

Until recently, our stainless steel tapping sleeves were only available with 4" through 12" flanges.

Today Ford takes a BIG step forward with the introduction of the FTSAS All Stainless Steel Tapping Sleeve for 14" through 24" flanges.

The FTSAS is specifically designed to withstand the demands of larger taps.

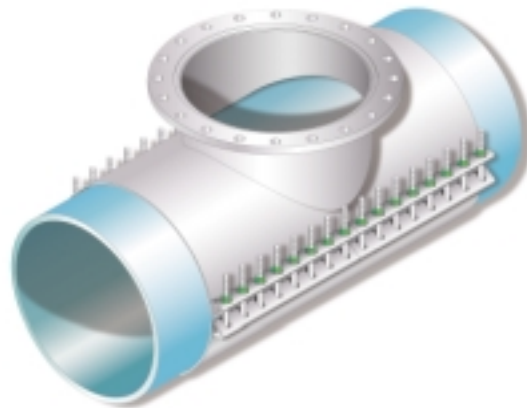

A thicker outlet neck, thicker saddle and strap plates, heavy stainless steel lugs, and highly efficient (removable) bolts on the FTSAS provide the strength to properly compress the high-

profile outlet gasket. A machined channel in the saddle plate retains the outlet gasket as pressures increase, providing extra reliability.

Decades of manufacturing and field experience, combined with the superior design

of the Ford FTSAS, provide a BIG reliability advantage. Tap into the BIG jobs with the Ford FTSAS.

For more information contact your local Ford distributor or The Ford Meter Box Company, Inc.
