

The Ford Ultra-Seal Flange Gasket Still Leading The Way

The Ford Meter Box Company, Inc. has established a tradition for manufacturing high-quality and innovative products that provide exceptional performance. Ford continues this tradition by offering the Ultra-Seal cap-style flange gasket.

The Ford high-performance Ultra-Seal cap-style flange gasket literally extends beyond the edge of traditional flange gaskets. Unlike the ring-style and full-face gaskets, the raised lip on the outside circumference of the gasket allows the gasket to snap on to the flange and stay on. This eliminates the need for adhesives or a third hand to hold the gasket in place during installation.

Available for any class "D" or "E" standard waterworks flange, the Ultra-Seal gasket is not only easier to use, but also outperforms typical flange gaskets. The unique Ultra-Seal design provides an exceptional hydraulic seal with concentrated gasket compression, which can compensate for most flaws on mating flanges. The Ultra-Seal can withstand pressures well above the flange rating.

If you are looking for that leading edge, the Ford Ultra-Seal flange gasket will ensure simple installation and reliable performance far beyond traditional flange gaskets.

For more information about the Ultra-Seal cap-style gasket, contact your local Ford distributor or The Ford Meter Box Company, Inc.
