

Introducing the Ford Retro-Z Setter

In today's world, providing clean, quality water to the consumer is more imperative than ever before. Many utilities are adding dual checks to their potable water meter program to protect the main from possible contaminants from residential services, as the result of back-siphonage.

For over twenty years, The Ford Meter Box Company has offered a variety of Retrosetters for existing meter services. Retrosetters incorporate a dual check valve without additional plumbing or expensive labor. Ford is committed to offering the variety of options necessary to meet the demands of modern water systems. Therefore, we have expanded this product line by adding the Retro-Z Setter, a compact design that retrofits a dual check valve into a shallow meter setting. The Retro-Z, Style C with an offset bottom bar (less valves), can be used in a Ford Yokebox or any equal. Retro-Z, Style B, may be used in other meter pits or vaults with limited space.

Retro-Z (Style B)

Retro-Z (Style C)

- The Ford Retro-Z Setter places a dual check into an existing water meter setting where height restrictions limit retrofit options
- Style B positions the meter directly above the centerline of the former meter location
- Style C with an offset bottom bar, positions the meter riser 90-degrees, 72-degrees or 60-degrees (as requested) from horizontal position to reduce height in shallow areas
- Valve options are available
- Bottom bar shall have an in-line ASSE 1024 approved Cartridge Dual Check Valve or optional spacer for future installation of a dual check valve

For more information about Ford Meter Box's ability to meet your meter setting requirements, contact your local Ford Distributor or The Ford Meter Box Company.
