## Ford Meter Box Expands the BOALINQ™ Product Line with a New Flanged Coupling Adapter

Ford Meter Box is proud to announce the latest innovation in its growing BOALINQ™ family of products: the **BOALINQ Flanged Coupling Adapter (BOALFCA)**. This new addition builds on the trusted performance and design of the original BOALINQ coupling, offering a powerful new solution for flange connections in the field.

Engineered with a flanged end ring on one end, the BOALFCA delivers the same hallmark speed, ease of installation, and reliability that define the BOALINQ name, while extending versatility and connection capabilities. With compatibility across a wide range of pipe materials such as steel, PVC, PVCO, ductile iron, cast iron, asbestos cement, and HDPE, the adapter is designed for a wide variety of connections.

Built with a removable inner gasket, the BOALFCA provides a flexible fit for varying outside diameters, reducing the need for excessive inventory and enhancing installation efficiency. Available in sizes 4" to 12", the adapter maintains the proven two-bolt design that field crews know and trust.

The introduction of the BOALINQ Flanged Coupling Adapter underscores our commitment to continuous innovation within the BOALINQ family. Each product is designed to support faster, smarter, and more standardized waterworks installations, empowering crews with reliable, field-friendly solutions backed by the industry-leading quality and customer support of Ford Meter Box.
