

## Constrict and Connect

The common boa constrictor is well known for wrapping around and constricting its prey. It's how we named our new BOALINQ™ coupling. It links two pipes securely together by tightening just two bolts, even when the pipes are different types or sizes. With nested gaskets pre-installed, the BOALINQ coupling compresses tightly around smaller pipe types (within its range) while accommodating larger pipe OD's by removing the inner gasket.

For superior corrosion protection, the sleeve and end rings are first coated with Ford Armorguard™ e-coat applied epoxy and then covered in a final layer with our fusion bonded epoxy top coat.

Boas are also known to lie in wait for just the right moment to strike. Now is the time to try the newest, lightweight, 2-bolt connection in your next trench. For a fast install with top-of-the-line corrosion protection, choose the BOALINQ coupling from Ford Meter Box.

- 4"-12"
- 260 psi
- 4° of deflection
- 2.25" minimum pipe insertion
