Fabrication Facility – Pell City, Alabama

Ford Meter Box is investing in the future with two major construction projects underway. A new brass foundry near our Wabash headquarters and a new fabrication facility in Pell City, Alabama, are both taking shape to support sustained growth and innovation.

The foundry, located just a few miles from the main manufacturing plant in Indiana, will offer some of the most advanced casting capabilities in the industry. Designed for safety, precision, automation, and performance, the new site complements the strong operational foundation already in place and adds the capacity to meet rising demand.

Further south, and located at our Pipe Products facility in Alabama, the new fabrication building will support the full Baker product line, expand resources for the Engineered Products and Solutions (EPS) division, and strengthen our ability to deliver traditional line-side fabrications.

Together, these projects will help reduce lead times and provide greater flexibility in production. These new facilities reflect a company-wide commitment to long-term growth and the continued delivery of high-quality products.
