

THE LARGEST SELECTION OF COUPLINGS, ONLY FROM FORD METER BOX . . .

The ability to offer the largest selection of couplings for the industry's broadest line did not happen overnight. For decades Ford Meter Box has produced couplings and fittings that work best for your individual and unique situation.

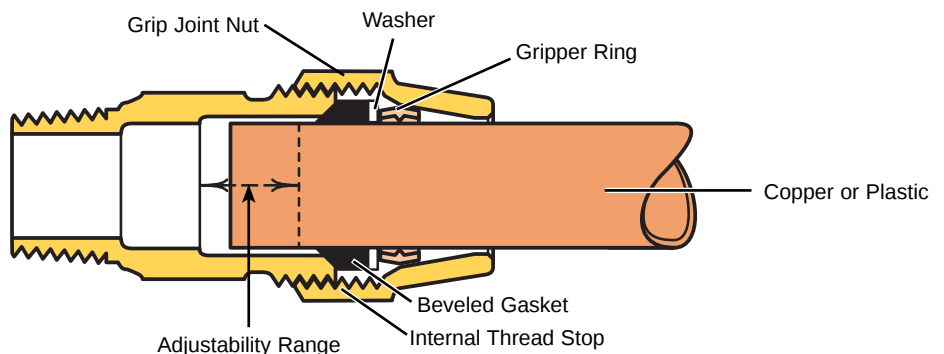

In the early to mid-1930s, Ford started making flare copper fittings. By the mid-40s, the Pack Joint for iron pipe was popular. The introduction of the Pack Joint compression coupling for use with copper tube size service line material was in the mid-1950s. Additional compression fittings, the Grip Joint and Quick Joint, were made in the 1990s.

For more information about Ford's broad line of fittings, contact your local Ford distributor or The Ford Meter Box Company.
