

Ford Adjustable Flanges

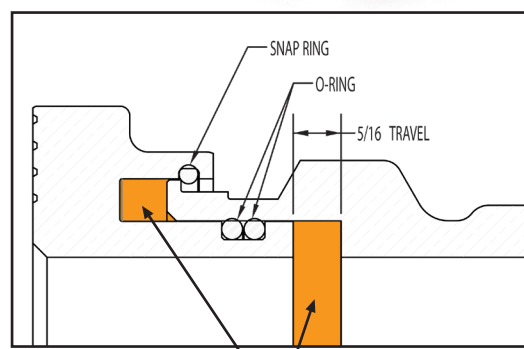

The Ford® Adjustable Meter Flange is an asset when it comes to 1-1/2" and 2" meter installations or change-outs. The flange features 5/16" of telescoping adjustment with 360 degrees of rotation for easy meter installations in tight settings. Rated to 300 psi, the flange assembly holds rotational position when pressurized. Adjustable meter flanges offer flexibility during meter insertion while ensuring optimal performance and a water-tight seal.

Perfect when spacing is either too long or too short, the new adjustable meter flange retracts or expands to accommodate the meter. With the provided drop-in gaskets and optional extended length meter support brackets, meter installations are trouble-free.

Available as a 2" flanged angle ball valve or straight 2" meter flange coupling, larger meter installations are easier than ever.
