

Ford Expands Lead-Pak Coupling Collection

For over 50 years, Ford has offered the Lead-Pak coupling for easy transition from lead services to plastic, copper, iron or PVC. In response to customer requests and the increasing number of partial lead line replacements occurring around the country, Ford has recently released a new No-Contact Lead-Pak coupling for installations where preventing direct contact of the lead plumbing line with other metallic water system components is desired.

Designed to mitigate the possibility of galvanic corrosion, Ford has designed a coupling with a permanently installed plastic gripper ring and plastic sleeve liner that surrounds the lead pipe to prevent direct contact.

For more information on partial plumbing line replacement products, please contact your local Ford distributor or The Ford Meter Box Company, Inc.
