It's *Quick* and Easy

The Ford® Quick Joint is an easy solution for service line connections. Celebrating twenty years of superior installations, the Quick Joint has proven to be a reliable and durable compression connection. Simply insert the pipe or tubing into the fitting and tighten the nut to the external stop.

Inside the nut, a heavy NBR (Buna-N) gasket and stainless steel grip ring are drawn down as the nut is tightened, providing a hydraulic seal and mechanical restraint. Tightening to the stop provides a visual indication of proper installation, eliminating the guesswork. The Ford Quick Joint, available on many Ford products, provides excellent pullout resistance and superior hydraulic blow-off protection when properly installed.

For more information about Quick Joints and other Ford compression fittings, including the Pack Joint, Grip Joint and Ultra-Tite, contact your local Ford distributor or customer service.
