

THE NEXT GENERATION IN JOINT RESTRAINT FOR PVC PIPELINES

THE SERIES 1500

Ford / Uni-Flange introduces the state of the art in joint restraint for AWWA C-900 PVC pipe...the new Series 1500 "Circle Lock"

restraining gland. The specially designed "ring segments" of the Series 1500 provide positive thrust

restraint, with full circle contact and support of the pipe.

Segments are activated by "Auto-Tork" bolts with heads

that twist off at the exact required torque offering a visual indicator of correct

installation. A "safety stop" is built into the bolt and gland casting, ensuring that bolts can never be over tightened. All components of

the Series 1500 are made of high strength ductile iron. The Series 1500 is FM Approved and is currently undergoing testing for UL

Listing and to ASTM F 1674

standard. It is manufactured

by Ford Meter Box,

certified to ISO 9001

quality standard.

Replace concrete

thrust blocks with the

highest technology

available in joint

restraint... the Series

1500 "Circle Lock" from

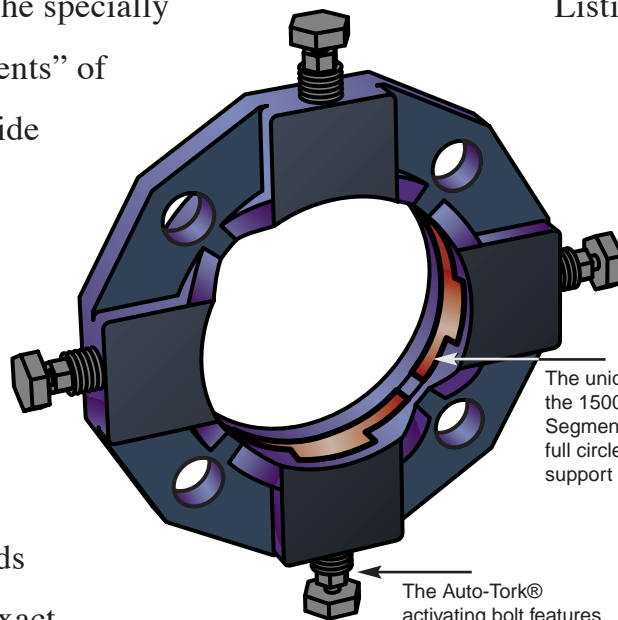

Ford Meter Box / Uni-Flange.

For more information about the

Uni-Flange line of Pipe Restraints contact your

local Ford / Uni-Flange Distributor or call the

Ford Meter Box Company.

The unique design of the 1500 utilizes Ring Segments to provide full circle contact and support of the pipe.

The Auto-Tork® activating bolt features a special "insurance stop" on bolt to assure there is no pipe damage.
