FORD® IRON YOKES

This is to certify that all iron yokes as manufactured by The Ford Meter Box Company, Inc., meet all applicable standards of ASTM A48, Class 25. The finish is epoxy applied via an electro-coat (e-coat) process.

The yoke bar is designed to hold, in a rigid position, brass yoke valves and or fittings, straight or angle, of various types with a variety of optional service line connections. This will provide permanent and proper spacing and alignment for the water meter and the expansion connection assembly, even during meter changes.

The yoke bar shall have a cradle for each end of the water meter and expansion connection assembly, which will stabilize the assembly in a functional position. A concave eyelet will be on each end of the Yoke for attaching valves and fittings by means of a yoke lock nut, which is supplied with each yoke valve and fitting.

The Ford Meter Box Company holds a certificate of registration to the International Standards Organization for the latest ISO 9001 Standard.
